Email: gang.jiang@utah.edu

Research Interests

AI-Driven Automated Modeling; Large Language Models; High-Performance Computing;
Building Performance Simulation; Sustainability & Resilience; Smart & Healthy Built Environment

Education

- **University of Utah** — Salt Lake City, UT, USA
  Ph.D. in Civil Engineering — *Aug. 2022 – Jun. 2026 (Expected)*
- **Tianjin University** — Tianjin, China
  M.Sc. in Architecture & Building Sciences, ***Excellent Thesis*** — *Aug. 2019 – Jun. 2022*
- **Yancheng Institute of Technology** — Yancheng, Jiangsu, China
  B.Sc. in Heating, Ventilation, & Air Conditioning — *Aug. 2015 – Jun. 2019*

Research Experience

- **University of Utah, Department of Computer Science** — Salt Lake City, UT
  Research Assistant — *May. 2025 - Present*
  - **US-NSF Projects**: (Primary Contributor) **Large language model (LLM) testing and development**: Conducted large-scale evaluation of LLMs, designed benchmarking protocols, and contributed to refining LLM architectures and training strategies for improved accuracy, efficiency, and robustness in specific domains.

- **University of Utah, Department of Civil & Environmental Engineering** — Salt Lake City, UT
  Research Assistant — *Aug. 2022 - May. 2025*
  - **US-NSF #2311685**: (Primary Contributor) Developed LLM-driven **auto-building energy modeling platforms (EPlus-LLM v1/v2, and Prompt-ABEM)** by integrating natural language with physics-based simulation to **enhance the accessibility and scalability of modeling**.
  - **US-NSF #2318720**: (Proposal Drafting, Primary Contributor) Drafted sections on the co-simulation framework and experimental design; Conducted **co-simulations of thermo-responsive desiccants** for building dehumidification and decarbonization, using EnergyPlus, Modelica, and Ansys, to **support healthy and sustainable built environments**.
  - **Global Change & Sustainability Center**: (Primary Contributor) Developed **high-fidelity building energy models** (by Resistance-Capacity mechanism and EnergyPlus software) and **efficient auto-calibration framework** that integrates an enhanced Bayesian inference method with a deep-learning, high-resolution surrogate model, facilitating the development of digital twins for **real-time monitoring and fault detection** in real-world.
  - **US-Utah-DOT #24-8342**: (Primary Contributor) Designed a **scalable Vision-AI tool** for automated road snow condition assessment, enabling more **effective snowplow operations and enhanced traffic safety**.
  - **US-Utah-DOT #24-8332**: (Contributor) Volumetric measurement of salt stockpiles using **photogrammetry, LiDAR, and depth cameras**: Reconstructed 3D point cloud models of all stockpiles in CloudCompare and conducted volume calibration and results evaluation.

- **Tianjin University** — Tianjin, China
  Research Assistant — *Aug. 2019 - Jun. 2022*
  - **China-NSFs**: Developed **fault detection & diagnosis methods for smart building systems** with incomplete data, integrating Modelica simulations with machine learning to enhance accuracy and robustness.

- **Industry Projects**: Conducted research on building energy efficiency and management, focusing on **optimizing energy efficiency and sustainability strategies**.

- **Amazon Web Services (AWS)** Beijing, China
  Intern *Jun. 2021 - Dec. 2021*
  - **Data Center Design**: Assisted in **planning and optimizing** data center infrastructure, including local generators, uninterruptible power supplies (UPS), power distribution, and cooling systems to enhance **resilience and scalability**.
  - **Data Center Operation**: Contributed to improving **energy efficiency and fault detection** in data centers through operational optimizations and system monitoring .

Teaching & Mentoring Experience

- **Teaching Assistant**: [Green Building Course] Prepared class materials, slides, and the syllabus; held weekly office hours; assisted students with project assignments.
- **Computer Lab Instructor**: [Green Building Course] Led a 3-week hands-on module on building energy modeling using EnergyPlus & OpenStudio, focusing on sustainable building design, retrofit analysis, and energy efficiency.
- **Research Mentorship**: [Our Research Group] Mentored undergraduate and early-stage PhD students through weekly meetings on research framing, data processing, and AI workflow development.

Conference & Workshop Presentations

- **ASHRAE Winter**: Transforming Building Energy Modeling Processes with Large Language Models. Feb. 2026. Invited Talk
- **ASHRAE Winter**: Real-World Applications of the EPlus-LLM platform. Feb. 2026. Poster
- **Build Next**: Toward Automated Building Energy Modeling with Large Language Models. Oct. 2025. Invited Talk
- **ASHRAE CIDCO**: Automating Building Energy Modeling from Natural Language. Aug. 2025. Invited Talk
- **ASHRAE Annual**: EPlus-LLM: A Novel Automated Building Simulation Platform Using Natural Language. Jun. 2024. Oral Presentation
- **GCSC Environment and Sustainability Research Symposium**: Improved Bayesian Calibration of Campus Building Energy Models. Feb. 2023. Poster

Open-Source Contributions

- **EPlus-LLM**: LLM-driven automated building energy modeling through natural language. (HuggingFace; GitHub)
- **EPlus-LLMv2**: New version of EPlus-LLM for more complex building modeling scenarios, e.g., building geometries, operation settings, and human behaviors. (HuggingFace; GitHub)
- **Prompting LLMs for ABEM**: A comprehensive guideline for prompt engineering of LLMs in automated building energy modeling for real-world applications. (GitHub)

Services

- **GitHub Maintainer**: I maintain open-source models/repositories (have been downloaded hundreds of times), and actively respond to issues.
- **Independent Reviewer**: *Renewable & Sustainable Energy Reviews*; *Cell Reports Physical Science*; *Building Simulation*
- **ASHRAE**: Associate Member

Programming Skills

- **Programming Languages**: Python, PyTorch, JavaScript
- **Technologies**: High-Performance Computing on Linux, Model Deployment, GUI Development
- **Software**: EnergyPlus, SketchUp, Matlab, Dymola (Modelica)
